

Achieving Comprehensive Care Consistently.

This fun-filled interactive program will help dentists plus all team members (including specialists) elevate their practices towards more “Big Case Dentistry” and comprehensive care. Instilling a philosophy and culture in your team for achieving comprehensive care.

Learning Objectives:

- Clinical data gathering – records, analyses, diagnosis, treatment planning, effective case presentation, team responsibilities, treatment delivery, and ‘making it happen.’
- The above data will then be analyzed relative to etiology, diagnosis, and treatment planning in the four categories of Periodontal, structural (teeth), myo-functional, and esthetics (as per Kois, Spear, Roger Levine)
- Avoid missing opportunities for achieving comprehensive dental care.
