

Surgically Facilitated Orthodontic Treatment (SFOT)

Hands-on Training

Periodontists, orthodontists and oral surgeons have expressed an interest in SFOT hands-on training, plus promotion of this treatment modality in their dental communities. This relates both to yourself, your community orthodontists and referring dentists.

I have built a detailed, surgically oriented PowerPoint seminar for Periodontists and Oral Surgeons plus their referring orthodontist/s to meet this request.

The lecture aspect is approximately 4 hours. This is then followed either by a hands-on surgical program (typodont), or a group interactive hands-on treatment planning program.

Appropriate supporting literature, (surgical and orthodontic) will be provided.

If additional information is needed, please either call me on my cell phone and email: richmanacs@gmail.com
Also, let me know if you have any colleagues (periodontists or oral surgeons) who might be interested in this SFOT training program. I shall then contact them.
